

no menu key in navigation bar on GT-S5360

Posted by yann_bonnamy - 2013/01/14 03:57

Hi, when using vmlite VNC server on a Samsung Galaxy Y GT-S5360, there is no menu button in the navigation bar (only the first 3 buttons are visible / see attached image) . i presume it is because the screen resolution of this device is smaller than usual. the very annoying point is that the "PgUP" key is not triggering the menu either. so we are blocked on many use cases because we see no possibility to display the menu .

is there any other key that could be mapped to the menu button ?

could there be a "1.5 display scale" option so that we could enlarge display on such devices?

Regards,

Yann. <http://www.vmlite.com/images/fbfiles/images/PBnoMenuButton.jpg>

yes, this is definitely caused by the smaller screen size. What is the width for the phone? 320?

We will make a smaller toolbar for this size.

At the time being, does F2 trigger the menu key two? When you rotate the phone, does the toolbar shows completely?

the size for this phone is 240 x 320 pixels

yes, F2 is triggering the menu , thanks a lot for this info, where could i have found it by myself ?

when i rotate the phone, my vncviewer remains vertical, and the toolbar remain the same,

Regards,

Yann.

Somehow auto rotation is not working correctly on your phone, one thing you can try is to press F6 key too to rotate the viewer, while we fix the bug.

On our VMLite VNC Server app, you can click Menu button, then click Help to see all hot keys.
