

Android Problems after up date - Server wont start on Wifi

Posted by rich0898 - 2013/09/11 05:06

Hi Ive just updated to the lastest version from the play store and now cant start the server. I have a rooted Razr I Xt890 and when i click start while connected to the wifi it pauses for around 20 seconds then displays an info box with a USB logo and "please connect this device to a pc..." I tried the usual reboot, reinstall, clear data & cache etc! Ive rolled back to a backup of the previous version (1.3.1) and that version works fine.

can you help?

Thanks

Rich

That's weird, we didn't change much from 1.3.1 to 1.3.2. Do you by any chance modify the apk? or resign it? If that's the case, it won't work.
