

Logon Credentials

Posted by dirk.kaehler - 2013/09/26 14:08

I installed VMLite XPMODE several months ago successfully on Windows 8. I also saved the Logon Credential, which worked fine. Unfortunately, I pressed "delete saved credentials" today by mistake. Now I have to use a password every time I start a session. I tried to save the Logon Credentials again but the GUI stops working whenever I try to do so by pressing "edit".

I tried already to install the application again, but it doesn't help.
