

Setting Up Keyboard Help ?

Posted by viperpiper - 2013/10/02 08:07

When running this on my samsung s4 should I be changing the default keyboard to the vmlite keyboard ? If I try using my swipe keyboard on the phone and I try typing on my computer the shift key for capitals doesn't work. If I change the default keyboard on the phone to the vmlite keyboard then the shift key does work but I can't get to the home screen when I click the home icon with my mouse on the bottom toolbar. Any help would be appreciated with setting this up.

Thanks for posting this - I didn't realise I needed to make VMLite the default keyboard for the shift key to work. Good luck with getting to the home screen...
