

Connection error: Android 4.2 onwards for secure apps

Posted by l3mobile - 2013/10/23 00:32

Hello,

I installed VMLite VNC Server on Samsung Galaxy s4 (i9505) with Android 4.2.2
Then I connected it to the PC with USB and accessed mobile phone from PC. Everything worked fine.
But while testing the mobile app thru its image on PC (client), I got the error on specific screen (error
like: "Disconnected....."). And on that specific screen I can NOT even take the screen shot on my mobile.

What could be the reason. Frame Buffer access OR Hardware acceleration?

thank you.
KP

This is interesting, we had similar issue with one bank app, but then we fixed something and it worked.
Probably a bug from our side, can you tell what is the app causing this problem? so can try to reproduce
the bug and fix it.
