

## VMLite Vnc Server is not started

Posted by mohamed.yusufdeen - 2013/12/18 19:02

---

I have same problem found in my vnc server is not display any ip address and display server is stopped in my mobile phone...

Instructions:

- (1) Enable USB debugging on your android device by going to:  
Settings > Developer options > USB debugging, or  
Settings > Applications > Development > USB debugging
- (2) Connect your android device to this PC with USB cable.
- (3) Click the above Start VMLite VNC Server button.

Starting VMLite VNC Server on device ...

Checking Android devices ...

\* daemon not running. starting it now on port 5037 \*

\* daemon started successfully \*

List of devices attached

90c686c6 device

VMLite VNC Server is successfully stopped on 90c686c6.

VMLite VNC Server is successfully started on 90c686c6.

You can now safely disconnect your device from this PC, and quit this program.

If you can't connect to the IP address shown on device, you can click the USB Connect button to set up USB connection. <http://www.vmlite.com/images/fbfiles/images/vm.JPG>

is this latest version 1.4.4 for the vnc server? This indicates the server has exit. If you use the cracked version from the Internet, this is the desired behavior. We deliberately do this.

If you purchased the app from google play, please let me know, and I can remotely debug the problem.

If you are not purchased from google store, it won't work. There are some cracked versions on the net for our vnc server, it behaves like what you observed. If the binary is modified, our server will simply quit without any messages.
