

## VMLite VNC Android Server - Raspberry Client???

Posted by eadhome25 - 2014/01/09 19:56

---

I have been told that the VMLite VNC Server is the best android vnc server. (no other android vnc server I tried has connected properly) I want my client computer to be a raspberry pi. The goal is an auto start connection to the android vnc server allowing the raspberry pi with touch screen to control the android. (prefer USB connection over wifi)

how can I install the "VMLite android app controller" on the rpi?  
or is there another way around this?

I am glad you like our vnc server, will make sure it stays the best.

We are actually merging vnc server and rPlay, so you can stream audio/video/screen from android to pi, in the meantime, you can control the device from pi. Stay tuned !

Now back to your question, you can install adb to pi, then issue some command.

Look at our vaac page on Linux instructions
