

can this be used outside a home network?

Posted by l33boy - 2014/01/27 11:44

Hi guys
Can I use this to browse my android TV stick from work or wherever using my android tablet?
Cheers

for now, you will need to setup a port forwarding in your router, 5801 and 5901, then use your router's ip address to access from outside world.

We are working on a firewall friendly version, not ready yet.

will I need a static ip address for this to work?
cheers

no, you don't. you need to use your router's ip address, which won't change often.

Is the device and pc using the same wifi network?

If there is no wifi available, you can install VirtualRouter on your pc, and your device can connect to this virtual router.

I want to use my Android 3188 tv stick as my server
It needs to be a secure connection from the internet.
I tried loading the server on the stick but I could not see any options for security at all?

You can set a password. Encryption is not supported at the moment.
