

[Help] Frame rate really low when using VNC viewer on PC =(

Posted by mkim055 - 2014/02/27 03:45

Hello everyone, as mentioned in the subject title, I am getting very low fps when using any sort of VNC viewer.

I have tried using HTML5, original JAVA viewer, Ultra VNC Viewer and Tight VNC Viewer. They are all running at ~5 fps. Also tried lowering image quality/color format and changing compression level, and neither of them helping in any way

Is there a way to improve the framerate?

I am using:

Samsung Galaxy S3 I9300 - JB 4.4.2 AOSP Custom (Rooted)

VMLite VNC 1.4.4 Application

USB Connection for the server connection

Windows 8 Pro

HTML5 / Ultra VNC Viewer / Tight VNC Viewer
