

VAAC installation fail

Posted by XXPepper - 2014/05/10 16:19

I just tried to install the VAAC app on my Windows PC three times and got a fail error each time.

Finally returned the VNC Server app for a refund. Sorry.

The whole "need to connect to a PC" thing makes it not suitable for the remote support task that I had in mind.

Please do keep trying! It's so great that you're on the track of doing this without @\$%#W\$ing root being required. Not a problem for techies, but it's an impossible PIA for actual human beings.

sorry for the problem. This is due to USB drivers.

Can you install SnapPea (<http://www.snappea.com>), which contains lots of USB drivers. Once SnapPea is installed, then install our vaac program without installing USB drivers. Turn off USB Driver when you see the option.
