

### Note 3 - VNCLite won't start

Posted by chongtech - 2014/07/02 09:18

---

Samsung Note 3, and Windows 8 PC. Purchased the VMLite VNC Server on google play store. installed.

But can not run, it keeps telling me to connect my device to a PC, and you can download the free program using url.....

on the windows 8 workstation, I have the controller running, and it is able to run.

what can be the problem?

I will email you with download link to our new version of the vaac program, that should work.

Thanks,

=====

---

I have downloaded the software from the link provided in the email.

when installing, I am getting a "interrupted" and does not complete the installation.

You can turn off Install USB Driver to proceed.

---

As we did in Team Viewer session, it is working well now for you, so this issue is resolved.
