

Virtual Machine START - STOP - RESUME Very Very Slow

Posted by MichaelSmith - 2018/05/23 05:03

Hi,

i'm running various s.o. on virtual box over macOs 10.13 but whatever the system is (kali linux, windows 7, windows server 2016) the operation to start and stop take quite a bit from 2 to 5 minutes (just to appear the virtualbox splashscreen, the boot of the s.o. it's lighting fast) but the operation to pause and resume the virtual machine can take up to 15 minutes. The addition tools are installed in every machine, how can I improve it?

Please help.

I didn't find the right solution from the Internet.
