

Error while trying to install VMLite Workstation 4.2 Beta 1

Posted by AnErrupTion - 2020/03/15 00:55

Hey,

So I have an error when trying to install the latest vesrion of VMLite Workstation (version precised in the title) but I have an error :

failed to install vbootfs driver. error=1072

...and then another error :

failed to install vbootbus driver. error=1072

..and after these errors, the installer crashes because of some service deletion error.

I don't know why this happens. I'm on Windows 7 SP1 x64.

Best regards,
~ AnErrupTion
