

USB Connection

Posted by sublimnl - 2012/08/21 12:09

Hi, this works great for me on WiFi, but I would like to use it via USB as well. At my office the WiFi network is completely segregated from our wired network, and using WiFi tethering drains my battery pretty quickly, so USB would be ideal.

The feature list on the play store says "- supports WIFI and USB connections." How can I connect via USB? Thanks!

For now you need to run these commands manually from a command window:

```
"c:\program files\VMLite\Android App Controller\adb.exe" forward tcp:5901 tcp:5901  
adb.exe forward tcp:5801 tcp:5801
```

Then do localhost:5901 in vnc viewer
Or localhost:5801 in browser

We will remove this step in next release
